

Now that we have top n graphs
we have to implement more.

1. Average graphs

↳ top n averages from data type

2. Block - item specific graphs

all data

data type
(minecraft:mined,
minecraft:used,
...)

block/item

(minecraft:stone,
minecraft:iron-hoe,
...)

* example graph

crafted iron axe

3. Ratio graphs

↳ ratio b/n data type 1 and 2

↳ e.g. $\frac{\text{minecraft:killed}}{\text{minecraft:killed-by}}$

↳ could be both for leaderboard purposes
(like top n)

or just listing all ratios for given/all player(s)
